DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-22, 29, 31-33, 35-37, 39-41, 43, 44 drawn to storing a plurality of color components of an image in a planar; and packed format, such that the plurality of color components are stored in a mixed format of planar format and packed format during memory management of the image, classified in class 345, subclass 546.
 - II. Claims 23-28, 30, 34, 38, 42 drawn to inverse unitization, inverse discrete cosine transformation, motion compensating and block decoding classified in class 375, subclass 240.
2. The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, **invention I** has separate utility such as **a method comprising storage of color components of an image in different formats in memory without requiring invention II which is about reception of quantized block of an image, decoding it, performing motion compensation.** See MPEP § 806.05(d).
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
